Home Page

Desktop

About Page

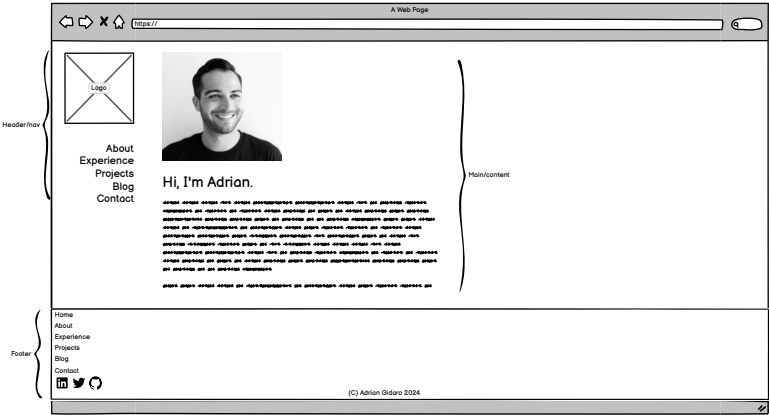

UX for About retains much of the same functionality as the home page, with slightly more written content.

Mobile

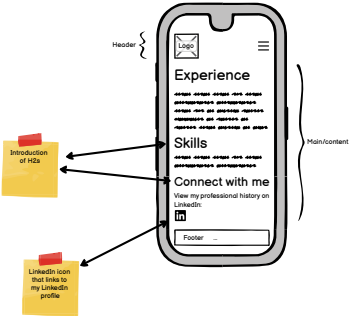

Tablet

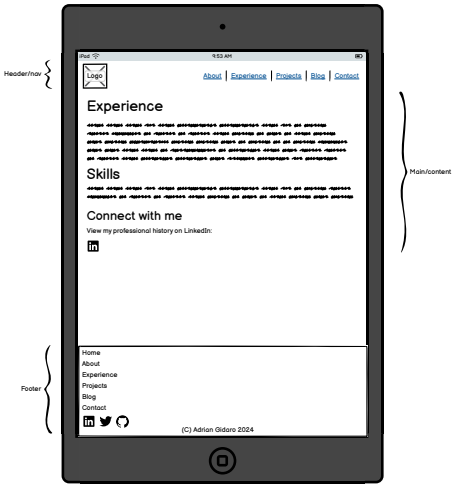

Desktop

Experience Page

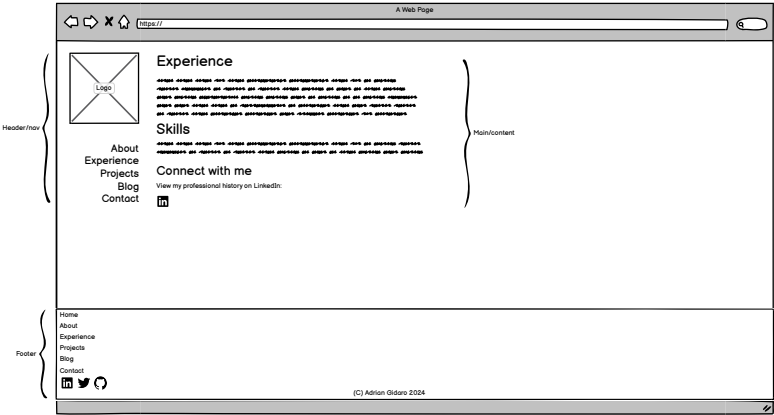

UX for Experience retains much of the same functionality as the home page, with slightly more written content and the removal of headershot image.

Projects/Blog Page

I plan on using the same layout for both the Projects and Blogs pages, as the functionality remains identical.

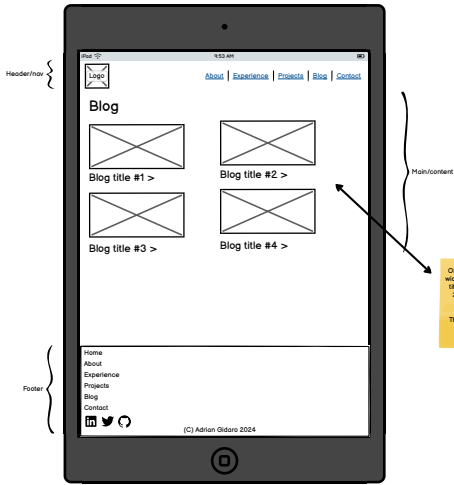

Each page will be used to showcase a variety of projects (or blogs) with disctheroughs to child pages for more details. Whenever for the individual child pages are on the following slide.

I will be creating 4 basic blog pages for launch to highlight the functionality of this page type.

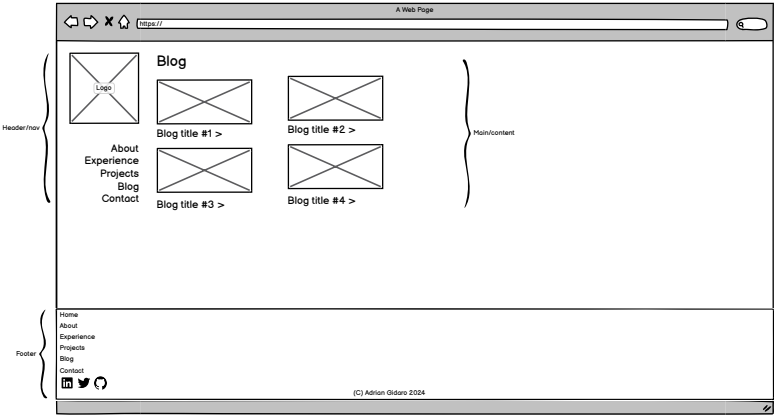

The projects page will have a "coming soon" placeholder, but its functionality will be identical to the blog page(s).

Individual Project/Blog Page

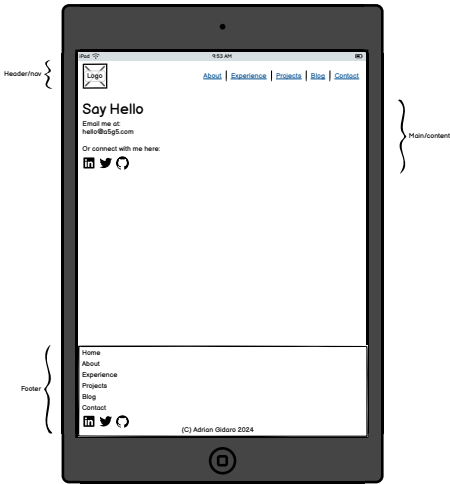

Contact Page

Key communication points will be email, LinkedIn, Twitter and GitHub.

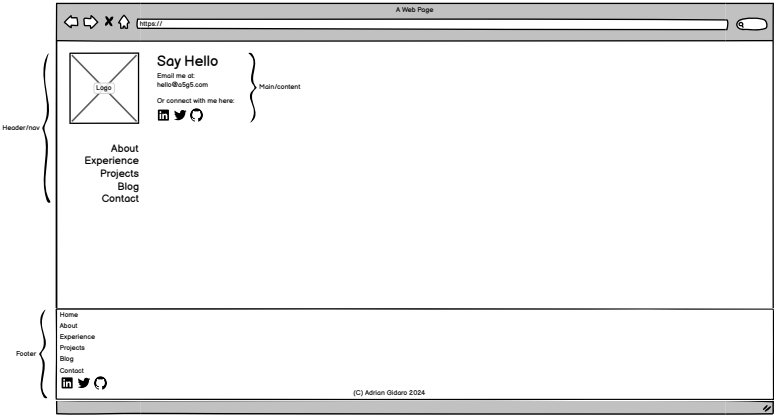

I have opted against a form on this page as I plan on launching the build ASAP via Netlify and a custom domain, and the Javascript required to make the form functional has not been covered yet.
